River Chub

Nocomis micropogon

Characteristics

- small eye high on head, long snout
- breeding male with large hump on head, tubercles on snout, brightly colored head: pink, orange, and blue
- similar to hornyhead chub, but without dark spot at base of tail, snout length equal to post-orbital length of head

Ecology and Distribution

- very common in streams of FCW
- prefers moderate size streams w/ gravelly riffles
- often hides around boulders, submerged logs & other structure in riffles
